To whom it may concern,

Casoni Fabbricazione Liquori Spa has recently obtained ISO 14001 Environmental Certification, an undertaking which indicates the significant efforts made by the company towards eco-sustainability increasingly moving towards the identification and control of the effects that their activities, and in particular every one of their products, can have on the environment.

Since December 2010, the company has equipped itself with a rooftop photovoltaic system covering an area of about 4,500 sqm, with a power of around 350 Kwp and that guarantees self-production of 30% of the company's total energy needs.

The surplus is put back into the Italian national grid network to be recirculated on via normal electric distribution lines.

Our environmental focus is also reflected in the provision of a charging column for electric cars (also available to third-party users). This is powered by our photovoltaic system during typical levels of solar radiation, while during bad weather it works using power from the national grid.

100% of the energy used by the company comes from renewable sources, that is 30% from the photovoltaic system and the remaining 70% purchased on the free market from suppliers who produce it from renewable sources such as hydroelectrics, photovoltaics and so on.

We can therefore confirm that Primo Aperitivo is produced with 100% energy from renewable sources.

To whom it may concern,

We can confirm that Primo Aperitivo is produced using a unique blend of ingredients specially produced for Primo Aperitivo.

We produce a proprietary gin, vermouth and bitter liqueur for Primo Aperitivo Negroni
We produce a proprietary vermouth and bitter for Primo Aperitivo Americano
We produce a proprietary vermouth, bitter liqueur and use a locally sourced wine for Primo Aperitivo Sbagliato.

We do not use any artificial flavouring.
